Hi Judy. I spoke with Mike Lippert, Water Works Director for the city of Wyoming, last week. Mike said that Wyoming is willing to do a limited sampling event for 1,4-dioxane in January 2019. The sampling would consist of raw water samples from the two impacted production wells that have had low-level detections of chlorinated VOCs.

Hi Judy. I spoke with Ohio EPA's Division of Drinking and Ground Waters (DDAGW) this afternoon regarding Wyoming Well Field. DDAGW said that Wyoming is not required to monitor for 1,4-dioxane and, to their knowledge, the water system has never sampled for it. DDAGW is going to contact Wyoming and ask if they'd be willing to sample for 1,4-dioxane since it's an emerging contaminant. I'll follow up once I hear back from DDAGW.
